LenDen Database Table Structure

1. Users Table

Field Name	Data Type	Key	Description
_id	ObjectId	PK	Unique user ID
name	String		Full name of user
email	String		User email (unique)
phone	String		Mobile number
password	String		Hashed password
pin	String		Hashed transaction PIN
role	String		user / agent / admin
balance	Number		Current account balance
isBlocked	Boolean		Account status
createdAt	Date		Account creation date
updatedAt	Date		Last updated date

2. Transactions Table

Field Name	Data Type	Key	Description
_id	ObjectId	PK	Unique transaction ID
senderId	ObjectId	FK	Reference to sender (User)
receiverId	ObjectId	FK	Reference to receiver (User)
agentId	ObjectId	FK	Reference to agent

amount	Number		Transaction amount
type	String		send / receive / cash-in / cash-out
status	String		success / failed / pending
transactionFee	Number		Fee charged
createdAt	Date		Transaction date

3. Agents Table

Field Name	Data Type	Key	Description
_id	ObjectId	PK	Unique agent ID
name	String		Agent name
email	String		Agent email
phone	String		Contact number
password	String		Hashed password
balance	Number		Agent account balance
isApproved	Boolean		Approval status
createdAt	Date		Registration date

4. Admin Table

Field Name	Data Type	Key	Description
_id	ObjectId	PK	Unique admin ID
name	String		Admin name
email	String		Admin email
password	String		Hashed password
role	String		Admin role

createdAt	Date		Account creation date

5. Requests Table

Field Name	Data Type	Key	Description
_id	ObjectId	PK	Unique request ID
userId	ObjectId	FK	Reference to user
agentId	ObjectId	FK	Reference to agent
type	String		cash-in / cash-out
amount	Number		Requested amount
status	String		pending / approved / rejected
createdAt	Date		Request date

6. Notifications Table

Field Name	Data Type	Key	Description
_id	ObjectId	PK	Unique notification ID
userId	ObjectId	FK	Reference to user
message	String		Notification message
type	String		info / alert
isRead	Boolean		Read/unread status
createdAt	Date		Notification date
